**IMPROVED
DESIGN**

Introducing the *updated* SureCav Cavity Spacer System

We have now made SureCav even easier to use!

SureCav has been redesigned using injection moulded, recycled polypropylene and is now produced by a leading Somerset based cavity product manufacturer

Just look at these major improvements to greatly assist your build:

- Polypropylene is a more robust material for on-site handling
- A new fold line has been incorporated into the design to simplify corner construction

- Corner joining strips are no longer required
- The finished product has a more regular profile for more compact transportation

SureCav still ensures absolute integrity of the cavity:

- SureCav guarantees a clean 50 mm, moisture free cavity that also arrests water penetration from wind driven rain in any exposed position
- Increases floor space by up to 5%, adding value to the project and reduces costs, compared to using concrete backing blocks

SureCav is a Cavity Wall Spacer System, BBA Approved 04/4154

40 tonnes of 100 mm.
concrete blocks
